

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

Yes, embedding special rules in televisions that restrict the use of broadcast data is not in the public interest.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

Yes. Networks are commonly used within homes to link multiple devices together. These limitations would unreasonably restrict such applications.

Other Comments:

I oppose the Notice of Proposed Rulemaking #02-230. Individuals, not just industry "professionals", should have access to fully functional digital televisions.
